PARTNERSHIP BRIEF · OCTOBER 2026 · PREPARED FOR VALR

PAY TO PLAY. PAY THE WINNER. ANYWHERE.

Get Lucky Golf wants VALR's stablecoin rails for taking entries from golfers around the world and paying hole-in-one winners in minutes, not weeks.

WHAT GET LUCKY IS

A hole-in-one challenge in an app. A golfer picks a par 3 at a partner course, pays an entry of R50 to R1,000, records one tee shot on their phone, and if it drops they win up to R1,000,000. Every paid prize is insured by Santam under a hole-in-one policy placed through Indwe Risk Services. Every winning shot is video-verified before a cent moves. Players are 18+. It is the hole-in-one prize South African golfers know from every corporate golf day, available on any round.

R1M
top prize on a R1,000 entry; six tiers from R50

TOP 100
South African courses listed; partner par 3s open to play

DEC 2026
live broadcast event at Fancourt with a R10m hole-in-one prize

$ PRIZES
golf trips and tours already pay out in dollars, up to $50,000

THE PROBLEM WE HAVE

Card schemes read "pay an entry, win a prize" as gambling, whatever the skill or the insurance behind it. Our Apple Pay and Google Pay processor declined us on that basis this week. PayFast carries rand entries today, but it cannot take a dollar from a visiting golfer, and paying a winner in Dubai, London or Nairobi means a SWIFT transfer, a week's wait and a bank's cut of a prize.

WHY VALR

VALR already moves value the way we need it to: rand in, stablecoin across the border, local currency out. The TPPP licence, VALR Pay, the OpenPayd fiat rails in USD, EUR and GBP, and the Onafriq mobile-money network across Africa are the pieces of an international entry-and-payout rail that no card processor will build for us. And VALR has shown it will put its name on sport.

WHAT WE WOULD LIKE TO EXPLORE WITH VALR

- **Entries through VALR.** "Pay with VALR" at the stake screen for VALR's 1.8 million users, in rand, USDT or USDC, and a rand entry rail on VALR's payment licence for everyone else.
- **Winners paid in stablecoin.** A verified winner, at home or abroad, paid in USDC or USDT to a VALR wallet within the hour, with rand, dollars, pounds, euros or mobile money a tap away.
- **International entries.** Visiting golfers and touring groups pay in their own currency through VALR's fiat and mobile-money on-ramps, settled to us in stablecoin.
- **Prize treasury.** Our dollar-prize float held in USDC on VALR Business, so a $50,000 prize is a $50,000 prize whatever the rand does, with the API to automate it.
- **A broadcast moment.** A VALR hole-in-one prize paid live, on air, in crypto, in December. Crypto For Everyone meets a million golfers.

We are upfront that this is a skill-based, insured prize competition and that some processors will not touch it. We would rather hear VALR's compliance view in the first meeting than the last.

30 MINUTES WITH THE VALR BUSINESS TEAM

WHY WE THINK THE FIT IS REAL

VALR IN ONE TABLE

SCALE	Founded 2018, Johannesburg. 1.8 million users, 2,000+ corporate and institutional clients. Africa's largest exchange by volume: 544 million USDT on USDT/ZAR in August 2026, against 39 million at Luno and 12 million at Binance.
BACKING	$55 million raised; the Series B of over $50 million at a $240 million valuation was led by Pantera Capital, with Coinbase Ventures and Fidelity's F-Prime Capital.
LICENCES	FSCA Category I and II crypto asset service provider (FSP 53308), ODP licence for derivatives, TPPP licence for third-party payments, NCR credit provider, regulatory approval in Europe, provisional Cayman VASP licence (May 2026) for cross-border transfers.
BUSINESS PLATFORM	Custody, APIs, treasury management and stablecoin payments for companies. FNB launched its crypto service on VALR's infrastructure in October 2026; more banks are in build.
PAYMENTS	VALR Pay: free instant transfers in rand, USDT or USDC, and payment at 31,000 stores through Zapper, Scan to Pay and Peach. A Visa card. Mukuru's USDC savings product runs on VALR.
ACROSS BORDERS	OpenPayd virtual IBANs for USD (SWIFT), EUR (SEPA) and GBP (Faster Payments), settling with Circle. Onafriq: mobile-money deposits in local currency across 43 African markets, settled in stablecoin. Kenya expansion under way.
SPORT	Multi-year shirt and stadium sponsor of the DHL Stormers under the line "Crypto For Everyone".

HOW THE MONEY WOULD MOVE

- **Local golfer, rand entry:** VALR Pay or a rand rail; we settle in rand or USDC on VALR Business. No cross-border leg.
- **Local winner:** USDC or rand to their VALR wallet. Domestic on both sides; nothing to report to FinSurv.
- **Visiting golfer:** pays in USD, EUR, GBP or mobile money into VALR's rails; we receive stablecoin.
- **Winner abroad:** paid to a VALR wallet or off-ramped through OpenPayd to their own bank. The one leg that needs the regulatory answer below.
- **Treasury:** dollar prize float held in USDC, converted at payout, automated through the API.

WHAT WE WOULD CHECK WITH VALR

- **Compliance appetite.** Card schemes put us in a gambling MCC. We are a skill competition with no house edge and a Santam policy behind every prize. Where does VALR's own risk framework land?
- **Exchange control.** The draft Capital Flow Management Regulations (April 2026) and Crypto Asset Manual (August 2026) would bar resident companies from cross-border crypto transfers and cap remittance-style payouts at R5,000 a day. Comments closed 30 September; VALR is leading the pushback. We need a winner-abroad payout that works under the final rules, or a non-resident's South African custodial wallet as the bridge.
- **Which stablecoin.** USDT has the depth locally; USDC has Circle and OpenPayd behind it. Likely both.
- **Timeline.** What can be live for the December broadcast, and what is a 2027 build.

A 30-MINUTE AGENDA

- Ten minutes: Get Lucky, the December event and the two payment problems.
- Ten minutes: VALR Business, the payments launch, and what a merchant integration looks like in practice.
- Ten minutes: compliance and exchange control, straight answers both ways, and whether there is a pilot worth scoping.
